

## **Our Warranty, Your Satisfaction.**

Since 2001, GRB Bearings, a 100% Canadian family owned company, has been a successful bearing supplier to distributors and OEMs across Canada. Our bearings are mainly imported from carefully selected manufacturers in China, and are made according to the international "ISO" quality control system, and under the minimum "ABEC 1" precision standard. Our confidence in our product is such, that we offer the best warranty in the industry.

If you are not totally satisfied with the quality of the bearings imported and manufactured under license for GRB, we will take them back (some conditions apply).

We are making it our duty to offer quality products to our customers; however, if an item happens to be defective, we will replace the product under the following conditions:

- The warranty is limited to the replacement or, at our discretion, the emission of a credit note.  
No other claims such as labour, loss or damage will be accepted and/or reimbursed
- The warranty is limited to 90 days from date of invoice
- Abusive usage, improper installation and/or inadequate maintenance render this warranty null and void
- GRB reserves the right to verify the proper installation of the material in question
- All parts must be returned prepaid to GRB

# LEGAL NOTICE

## *Force Majeure*

GRB, our employees and/or agents take no responsibility for loss or damage occasioned by delay in delivery or inability to deliver, whether these events are caused by us, or arising from circumstances beyond our control such as acts of God, fire, accidents, strike, lockouts and/or any other similar causes.

## **Disclaimer**

We've taken the greatest care to insure the accuracy of the information contained in this catalog but **GRB** will not accept liability for any errors or omissions. Products presented in this catalog are not necessarily available from stock. Please contact **GRB**'s sales representative for availability. The structure and technical data shown in this catalog are those being used at the time of publication and **GRB** reserves the right to make changes without notice. The information listed in this catalog is for reference only. Rest assured that any comment and suggestion will be considered with great care.

**Some sizes may not be available at the time of your order or might require a minimum quantity.  
Please check with your representative before making a definitive selection.**

## **Other products available**

- Ball Bearings, Metric & Inch Sizes
- Spherical Plain Bearings
- Rod Ends
- Needle Bearings
- Roller Bearings
- Cam Followers
- Tapered Roller Bearings
- Thrust Bearings
- Pillow Blocks & Inserts
- Conveyor Bearings

And more!

Visit our website **www.GRBbearings.com** for up to date information.

# Technical Section

The following pages will show many mounting arrangements of bearings with their housing. Essentially, a mounted unit consists of a double sealed ball bearing mounted in a cast iron or pressed steel housing.

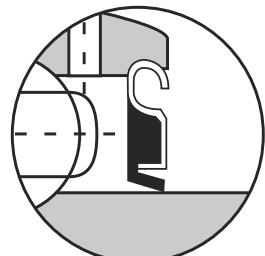

The outer ring of the bearing is spherical and fits in a machined housing, permitting self alignment between the two members, thus compensating for misalignment of the units resulting from errors during mounting and distortions of the foundation.

## Single Seals

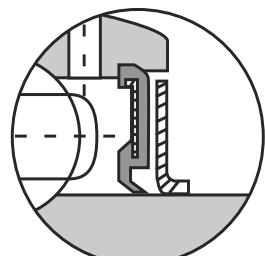

### Single Seals

Light duty inserts of series SA, CSA, SB and CSB are equipped with these seals, consisting of a single lip rubber seal bonded to a metal shield.

### Dual Seals

As a standard, GRB stocks normal duty inserts with dual seals, consisting of a slinger attached to the inner ring, and a single lip rubber seal attached to the outer ring. As the inner ring rotates, foreign matter is evacuated away from the rubber seal.

### Triple Seals

As an option, we offer inserts equipped with triple lip seals for applications where much dust is present such as in some agricultural machinery.

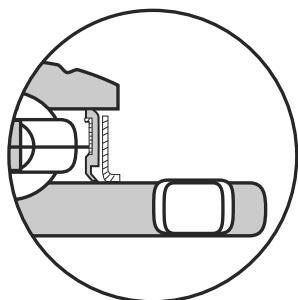

# Technical Section

## Recommended Tightening Torque of Set Screw

Bearing no.		Set Screw	Torque Nm	Torque in/lbs
SB 201-203		M5 x 0.08 10-32	3.4	30.09
UC & SER 204-206	UC 305 - 306	M6 X 1 1/4-28 UNF	5.4	47.8
UC & SER 207-209	UC 307	M8 X 1 5/16-24 UNF	11.3	100
UC & SER 210-212	UC 308 - 309	M10 X 1.25 3/8-24 UNF	21.6	191.2
UC & SER 213 - 218	UC 310 - 313	M12 X 1-1/2 7/16-20 UNF	32.4	286.8
-	UC 314 - 315	M14 X 1-1/2 9/16-18 UNF	41.2	364.7

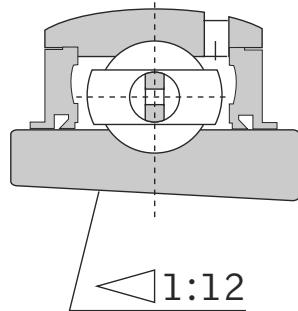

## Locking Systems

Set Screw Type. Two setscrews at 120° are fastened on the shaft. The most popular system, it permits rotation in both directions.

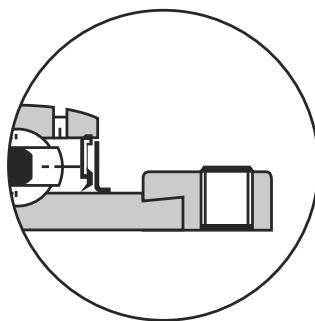

## Adapter Style

In this system, the inner ring diameter of the bearing has a taper of 1:12. A corresponding tapered adapter is fitted, and the nut is tightened by hand, then rotated by 2/5 to 3/5 revolutions with a spanner, assuring good concentricity.

## Eccentric Collar

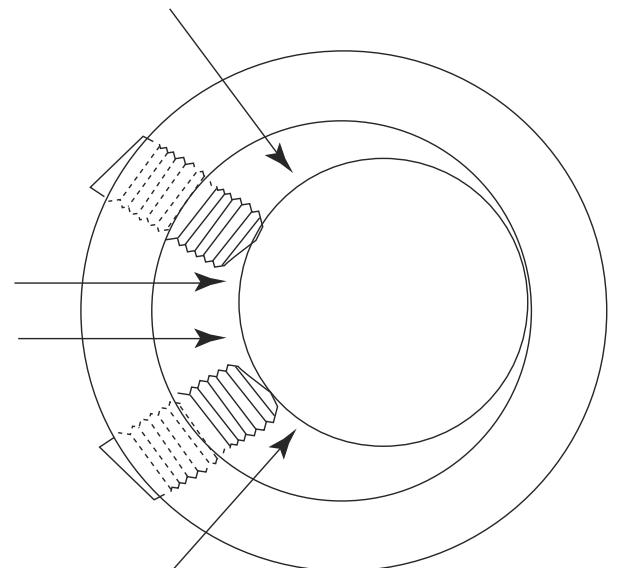

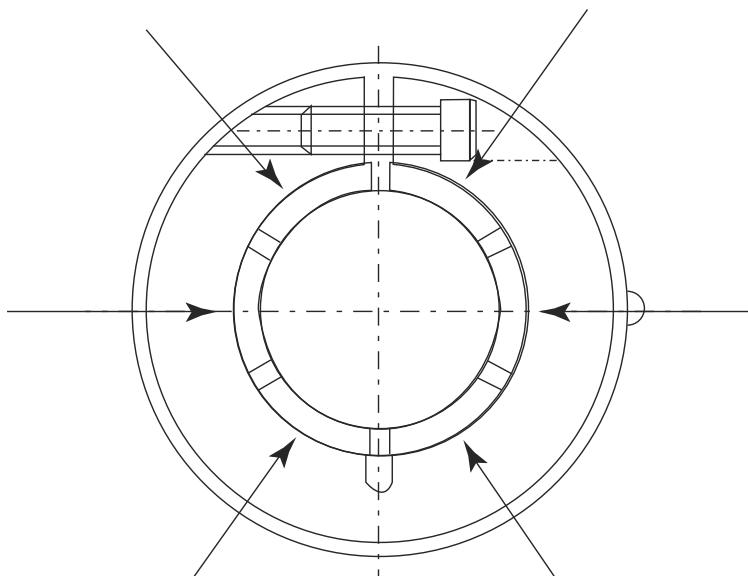

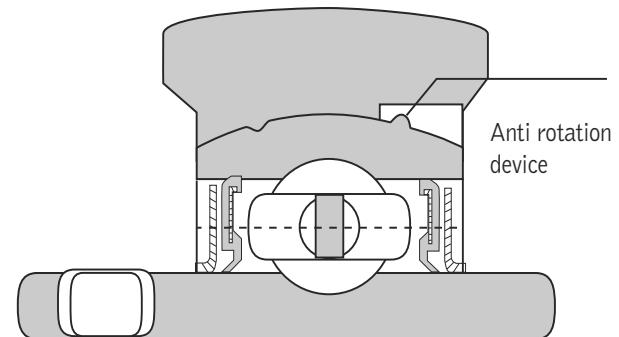

The collar must be tightened in the direction of shaft rotation. This system is not recommended in applications where rotation is reversed.

This system will provide the same near perfect concentricity achieved with the tapered adapter, with fewer parts. Only one cap screw tightens the inner race extention around the shaft. In higher speed applications such as fans and blowers, annoying vibrations are virtually eliminated. This system does not mar the shaft and allows rotation in both directions.

## Anti Rotation Device

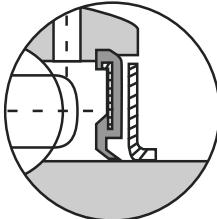

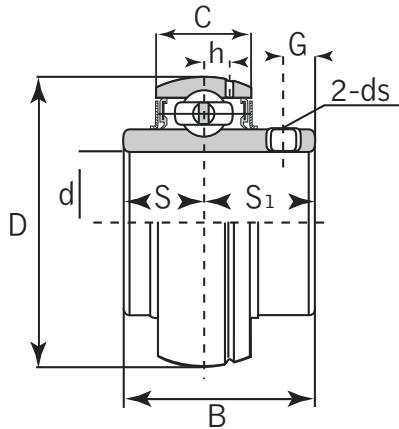

Bearing inserts are equipped with a locking pin to prevent the outer ring from rotating in the housing. This feature may save the housing if the bearing jams.

# Radial Internal Clearance

Bearing Inserts

The radial internal clearance is per JIS B1520, equivalent to ISO 5753 for radial ball bearings. GRB stocks normal clearance for cylindrical bore bearings, and C3 clearance for tapered bore bearings because of the expansion force which results from the tightening of the adaptor. Clearances higher than C3 are used in high temperature applications. C2 clearance is sometimes required in fan applications to reduce vibrations. Bearings with these clearances are available upon request.

## Cylindrical Bore Bearings - Unit = $\mu\text{m}$

Bore Diameter d (mm)		Clearance Symbols							
		C2		Normal		C3		C4	
over	incl.	min.	max.	min.	max.	min.	max.	min.	max.

120	140	18	48	41	81	71	114	105	160

# Material of Ball Bearing Inserts

The material of the races and balls have the following qualities:

1. Large fatigue strength against repeated stress due to fatigue fracture of the race surface which governs the life of the bearing.
2. High limit of elasticity and high yield strength to prevent deformation when a large load is applied per unit area.
3. Large abrasion resistance against sliding friction between the retainer and the ball.
4. High strength against cracking due to impact load.
5. Small secular change in dimension and shape due to change structure of internal stress. GCr15 steel <JIS G4805> (High carbon chromium bearing steel) satisfies the above comparatively well, and its chemical composition is shown in the following table.

## Chemical Composition of High Carbon Chromium Bearing Steel

Class	JIS Symbol	Chemical Composition (%)					
		C	Si	Mn	P	S	Cr
2	SUJ 2	.95 - 1.10	.15 - .35	Under .50	Under .25	Under .25	1.30 - 1.60
		Equivalent to AISI 52100					
		.98 - 1.10	0.23	0.35	0.025	0.025	1.45

## Material of the Cage and the Rivet

The material of the cage is JIS G3141 (Cold rolled carbon steel sheet and strip) and is press formed.

The material of the rivet is JIS G3507 (Low carbon steel wire rods) SWRCH 12A.

The material of housings is HT200 JIS G5501 (Gray iron casting) and the mechanical properties are shown in the following table.

## Mechanical Properties of Gray Cast Iron HT200

Symbol	Thickness	Dia. of Testing Bar	Tension test	Traverse Breacking Test		Pressure Strength	Hardness Streghth

# Tolerance of Bearings

## Accuracies

The dimensional accuracies of GRB follow the tolerances prescribed in JIS B1558, equivalent to ISO 9628-1992.

## Dimensional Accuracies of Bearings

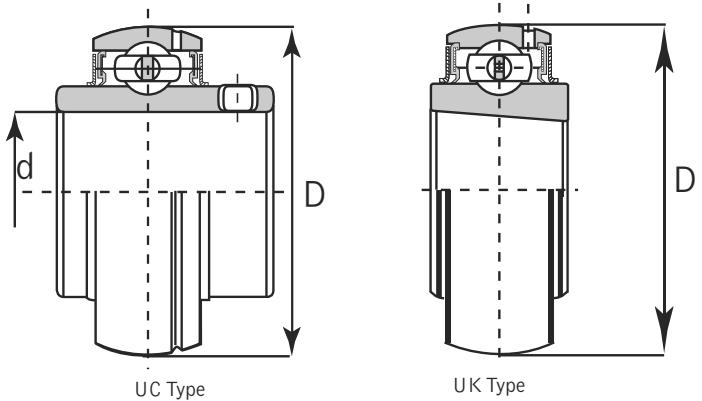

### Accuracies of Outer Ring - Unit = $\mu\text{m}$

D (mm)		$\Delta D_{\text{mp}}$		Kea
over	incl.	max.	min.	max.
30	50	0	-11	20
50	80	0	-13	25
80	120	0	-15	35
120	150	0	-18	40
150	180	0	-25	45
180	250	0	-30	50

D = Outside diameter of bearing.

$\Delta D_{\text{mp}}$  = Deviation of mean outside diameter.

Kea = Radial runout of outer ring.

### Accuracies of Inner Ring - Unit = $\mu\text{m}$

d (mm)		Cylindrical Bore Bearing								Kia	
		Bore Diameter				$\Delta B_s, C_s$					
		UC, HC, SA, SB, SER		SC		$\Delta B_s$		$\Delta C_s$			
		$\Delta d_{\text{mp}}$	Vdp	$\Delta d_{\text{mp}}$	Vdp	max.	min.	max.	min.		
over	incl.	max.	min.	max.	max.	max.	min.	max.	min.	max.	
10	18	+15	0	10	0	-8	6	0	-120	15	
18	30	+18	0	12	0	-10	8	0	-120	18	
30	50	+21	0	14	0	-12	9	0	-120	20	
50	80	+24	0	16	0	-15	11	0	-150	25	
80	120	+28	0	19	-	-	-	0	-200	30	
120	180	+33	0	22	-	-	-	0	-250	35	

d = Bore diameter.

$\Delta D_{\text{mp}}$  = Deviation of mean bearing bore diameter in a single plane.

Vdp = Variation of bearing bore diameter in a single radial plane.

$\Delta B_s$  = Deviation in a single inner ring width.

$\Delta C_s$  = Deviation in a single outer ring width.

Kia = Radial run out of inner ring.

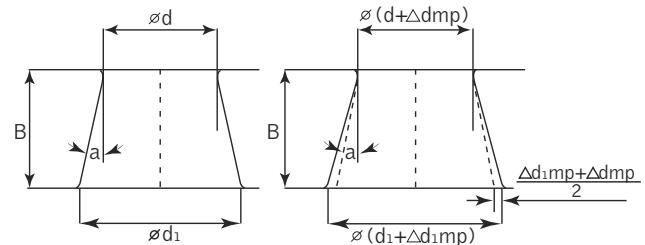

# Tolerance of Bearings

Accuracies

## Accuracies of Tapered Bore - Unit = $\mu\text{m}$

mm		$\Delta d_{\text{mp}}$		$\Delta d_{1\text{mp}} - \Delta d_{\text{mp}}$		Vdp
over	incl.	max.	min.	max.	min.	max.
18	30	+33	0	+21	0	13
30	50	+39	0	+25	0	15
50	80	+46	0	+30	0	19
80	120	+54	0	+35	0	25
120	180	+63	0	+40	0	31

Applies in any single radial plane of the bore.

d = Bore diameter.

d<sub>1</sub> = Basic diameter of theoretically large end of the tapered bore.

$\Delta d_{\text{mp}}$  = Dimensional difference of the average bore diameter within the flat surface at the theoretical small end of the tapered bore.

$\Delta d_{1\text{mp}}$  = Dimensional difference of the average bore diameter within the flat surface at the theoretical large end of the tapered bore.

Vdp = Inequality of the bore diameter within the flat surface.

B = Normal width of the inner ring.

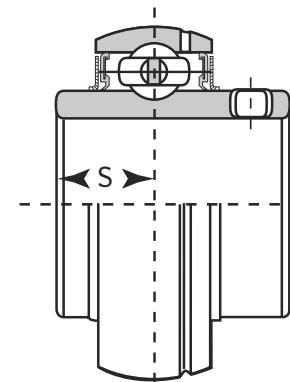

a = Half of the nominal tapered angle of the tapered bore.

a =  $2^\circ 23' 9.4'' = 2.385^\circ = 0.041643 \text{ rad.}$

## Tolerances in Distance(s) from Center Line of Spherical Outer Ring to Side of Inner Ring

### Accuracies of Tapered Bore - Unit = $\mu\text{m}$

Nominal Dimension of Bore Diameter d (mm)		Tolerance of n
over	incl.	max.
-	50	+/- 200
50	80	+/- 250
80	120	+/- 300
120	-	+/- 350

# Load Rating

## Basic Dynamic Load Rating

The basic dynamic load rating is the pure radial load applied to the bearing for a rated life of one million revolutions or 500 hours at 33.3 revolutions per minute. Expressed differently, the basic dynamic load rating is the constant stationary radial load, which a group of apparently identical bearings with stationary outer rings can endure for a rated life of one million revolutions of the inner ring.

## Static Load Rating

Basic static load rating is a load acting on a nonrotating bearing and is considered to correspond to a calculated contact stress of:

- 4600 MPa / 667174 psi for self-aligning BallBearings,
- 4200 MPa / 609158 psi for all other Ball Bearings, and
- 4000 MPa / 580151 psi for all Roller Bearings

at the center of the most heavily stressed rolling element and raceway contact.

When a bearing is not in motion or is operating at a slow speed under large static loads or shock loads, the static load rating must be taken into account. Generally, a safety factor is used for rotating bearings.

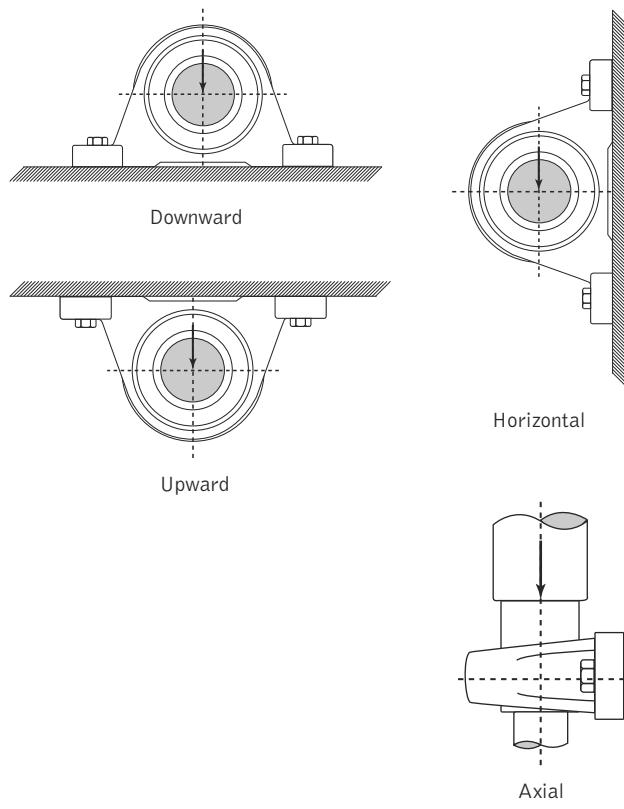

Operating Conditions	Load	Factor
Rotating bearings	Ordinary loads	1
	Stock loads	1.5
Non-rotating bearings that oscillate from time to time	Ordinary loads	0.5
	Stock loads	1

# Allowable Load

## Allowable Load of Cast Iron Housings

The allowable load capacities of housings differ substantially, depending on their shape and the load direction. Since ball bearing units are complicated in form, it is difficult to calculate their allowable loading capacities. In many cases, such values are entirely different from the actual ones. For this reason, the P type housing is taken here as the most popular example. The strength of the load from each direction is shown here as obtained from actual tests.

Part Number	Downward direction destruction strength	Upward direction destruction strength	Horizontal direction destruction strength	Axial direction destruction strength

## Allowable Load of Pressed Steel Housings

Pressed Steel Housings show deformation when subjected to a load. The deformation depends upon the direction and amount of the load, the shape of the housing, and thickness of the steel plate. Therefore, the allowable load must be such an amount that deformation of the housing may not disturb function. The allowable load on a Pressed Steel Housing in a radial direction shall be approximately 1/3 of the basic dynamic load rating of the bearing, and approximately 1/3 of the allowable radial load in the axial direction.

## Lubrication

Usually, grease replenishment is not necessary, since GRB bearings contain high quality lithium-based grease. However, at high temperature, or where there is exposure to water or excessive dust, re-lubrication becomes necessary from time to time. Always use high quality lithium-based grease. It is advisable to replenish the grease while the machine is in operation. Keep inserting the grease until you start seeing just a little grease oozing out from between the outer ring and the slinger.
